WAITHIEGENI JEDIDAH

INDUSTRIAL CHEMIST| WATER TREATMENT DESIGN ENGINEER

Email: jedidahgithinji12@gmail.com| **LinkedIn**: linkedin/in/waithiegeni-jedidah

Professional summary

Industrial Chemistry graduate with experience spanning laboratory analysis, materials testing and water treatment plant design. My experience includes laboratory research, wastewater treatment and technical plant design, with a continuing interest in applying scientific principles to practical engineering and environmental challenges. I believe engineering has its greatest impact when it quietly makes everyday life better.

Core Skills

- Technical documentation, water quality interpretation, water chemistry, water and wastewater treatment, process engineering.
- Laboratory Techniques: AAS, FTIR, AES, titration, sample preparation, chemical analysis
- Water & Wastewater Testing: Sampling, analysis, QA/QC procedures
- Regulatory Compliance: Knowledge of industry standards and safety protocols
- Problem Solving & Reporting: Investigating anomalies, corrective actions, documentation

Professional Experience

- **Water treatment design engineer**

Kridha Limited

May 2026 – Present

- Design and size water treatment systems based on client requirements and raw water analysis.
- Assist in preparing technical proposals, quotations and project documentation.
- Contribute to the design of reverse osmosis, softening, filtration and wastewater treatment systems.
- Interpret water quality analyses to recommend appropriate treatment solutions.

- Collaborate with technical and sales teams to develop customer-specific plant designs.

- **Quality Control Assistant (***Volunteer***)**

Devki Steel Mills

February 2026 – April 2026

- Performed in-process and final quality inspections across steel manufacturing operations including acid pickling, phosphating, wire drawing and annealing
- Verified compliance with ISO quality standards through dimensional inspection, tensile strength testing and product specification validation.
- Conducted precision measurements using Vernier callipers, micrometer screwgauge and Universal Tensile Strength (UTS) testing equipment to ensure product conformity.
- Identified non-conforming products before downstream processing, reducing the risk of production defects.
- Maintained accurate quality inspection records to support product traceability and continuous quality improvement.

Customer Service Representative– Call Center Operations

Call Center International (CCI)

October 2024 – May 2026

- Resolved customer concerns efficiently through active listening, clear communication, and practical problem solving in a fast-paced environment.
- Maintained high customer satisfaction by balancing empathy with accurate policy interpretation during complex service interactions
- Investigated account issues and guided customers through appropriate solutions reducing repeat contacts and improving overall customer experience.
- Consistently met quality and performance expectations while managing high daily call volumes and adapting to changing operational priorities.
- Collaborated with cross-functional teams to ensure timely issue resolution and seamless customer support.

Laboratory Technician (Attaché)

Materials Testing and Research Division, State Department for Roads

Jan 2023 – Apr 2023

- Conducted laboratory analysis of water, soil, cement and construction materials to support infrastructure quality and regulatory compliance.
- Operated analytical instruments including Atomic Absorption Spectroscopy (AAS) and Flame Photometry to generate accurate laboratory results.
- Prepared technical laboratory reports that informed engineering and construction decisions.
- Maintained strict laboratory quality assurance and safety standards throughout analytical procedures.
- Strengthened practical knowledge of chemical testing, laboratory operations and public infrastructure quality control.

Education

Bachelor of Science in Industrial Chemistry

Jomo Kenyatta University of Agriculture and Technology

September 2019 – June 2024

Project

Removal of Pb (II)ions from wastewater using activated carbon prepared from banana peels

Research project at Jomo Kenyatta University of Agriculture and Technology

- Prepared activated carbon from agricultural waste through controlled carbonization and activation processes.
- Evaluated lead removal efficiency using Atomic Absorption Spectroscopy (AAS) by comparing Pb (II)ions concentrations before and after treatment.
- Conducted laboratory experiments involving adsorption studies, sample preparation, centrifugation and analytical testing.
- Demonstrated the potential of sustainable, locally available materials for wastewater treatment applications.
